The Change I Want To Make

(Original)

Tenzin Wangmo

(Age 11, Bhutan)

Woochu Lower Secondary School, Paro

Bringing change in a community is a very important because it shows that our country is developing in such a way that people are moving towards modernization. Everybody can make a change to make a world better place to live.

The change that I want to make in my community is that I want to build bridges, construct road, supply electricity and to hire power tiller from government. I want to make changes because to develop my community and to make my community happy because our country is GNH country.

Firstly, I want to build bridges because in my community we have only one wooden bridge which is very old. So people in my community they are all fearing and they are not able to go to sell their organic products because the bridge might fall down. So the old bridge is discouraging people and make them dependent on other country's goods.

Second, I want to construct road in my community because if there is road, people can export and import their goods very easily and it will encourage them to produce more goods, so the farmer will work hard to produce more goods in order to earn more profit.

Third, I want to supply electricity in my community because in my community electricity supply is not there so for students it's very difficult to study even though they are willing to study. So I don't want to let that happen again in my community which will affect the future leaders of Bhutan.

Fourth, I will hire power tiller from the government to our people who are old and who don't have strength to work by themselves. It will also help them to work more because it consume less time and less human effort, so they will work all the day to earn more profit.

Lastly, if we want to develop our community all the people in the community should work as a team and they should preserve our culture and traditional. We should not argue with the people around us. This will not allow people to live happily and peacefully. And also if I changed the community and bring development it will benefit our community a lot, as

well as to the well-being of our life line.
